Executives and Project Leaders have long known that

“The best laid schemes of mice and men go often awry...” - Robert Burns, 1785

How do our clients minimize “going awry”?

They use **ProjeXray®** to:

- ♦ Identify high-risk project areas that could cause project delays or failure;
- ♦ Easily explain why some projects are going better than others;
- ♦ Manage expectations of senior leaders;
- ♦ Tracks & report changes in project risk profile due to specific mitigation actions;
- ♦ Compare risks across projects before approving a portfolio.

Case Study

A public sector client employed **ProjeXray®** to implement a packaged software, and used the dashboard (below) and our recommendations to:

- ♦ Pinpoint areas that needed immediate attention (above the red line).
- ♦ Save time in explaining complex project risks & mitigating actions to senior leaders.
- ♦ Reduce & track overall risk ratios and for 8 specific areas during the project.
- ♦ Develop and implement an organizational change management plan that helped turn staff resistance into support for the project.
